Calcified Tissue International publishes research emphasizing the structure and function of bone and other mineralized systems in living organisms. It includes reports and reviews on connective tissue and cells, ion metabolism and molecular biology, and research which reveals important facets of the human skeleton and bone and mineral metabolism.

Highlights of this international journal...

- **Clinical Investigation Section** features papers detailing studies in humans related to calcified tissue metabolism in health and disease.
- **Rapid Communications Section** with exciting new research developments, published within two or three months of submission.
- **Comments Section** with brief reports of preliminary, negative or confirmatory data.
- Provocative **Editorials**, written by prominent scientists in the field, that discuss the state of the art in specific areas of calcified tissue research.
